Technis’ solution is made unique by its ease of installation and real-time access to your infrastructure’s activity from any internet-connected device.
THE COMPANY

Technis transforms the flooring into an intelligent platform capable of sensing, recognising and predicting the activity happening at its surface.

By combining the high precision of a sensitive surface, equipped with more than 3000 active points per square meter, with artificial intelligence, Technis revolutionises people flow management.

Technis’ technology has been developed by a team of 12 engineers from the Swiss Federal Institute of Technology in Lausanne and has been granted eight innovation awards between 2015 and 2016. The increasing demand from the market accompanies its worldwide expansion in 2017.

TECHNIS’ SOLUTIONS

DATA ANALYTICS
Maximise your ROI with a personalised dashboard allowing you to follow your KPIs whilst crossing with any external data.

NON-INTRUSIVE
The very nature of the system guarantees a non-intrusive data generation respecting your privacy.

REAL-TIME
The information transmission happens in real-time for a live access from any end-user device.

CLOUD
The power of the cloud allows for a continuous data treatment and a centralised access to all services.
MyTechnis Intelligence ensures the translation of the collected data into useful information on the cloud.

The dashboard allows for a real-time monitoring of your events and the related performance indicators.
THE USE CASES

Thanks to a widely applicable technology, Technis answers the needs of several industries.

TECHNIS’ ADDED VALUE

We digitalise your surfaces offering constant innovation and improved customer service.

We offer reliable data analytics whilst allowing you to cross external data on your dashboard.

We give you access to tools required for resources and cost optimisation of your infrastructure.

Our personalised case study makes sure our customers obtain a turn-key, simple installation.
